PRODUCTS AND SERVICES

Efficient plastics processing
“Made by ARBURG”
PIONEER

Technology, expertise, service – we always give our best for you!
Our aspiration is: To be your technology and system partner! In every respect. Whether injection moulding or industrial additive manufacturing. Whether stand-alone machine or highly automated turnkey system. Whether process control or comprehensive digital data management – including cloud-based solutions. Regardless of the industry you are involved in, the processes you use, or the parts and unit volumes you want to manufacture. Our modular product portfolio has the right solution for all your requirements. We do our utmost to meet your efficient plastics processing needs.

WIR SIND DA.
THE REFERENCE FOR INJECTION MOULDING TECHNOLOGY: ALLROUNDERS

Why should you trust in our ALLROUNDERs? Because you can rely on the best that is available when it comes to injection moulding technology. From small to large. From conventional to vertical configuration. From performance version to high-speed machine. From comprehensively standardised entry-level model to customised process-technology-adapted machine. Our product range is aligned to your requirements in a targeted manner. The choice is yours: Precisely according to your wishes!

Wide range: We offer you machines with clamping forces from 125 to 6,500 kN.
“Made by ARBURG – Made in Germany”: We consistently implement this quality standard.

Highly compatible: Tie-bar spacings, cylinder modules and operating philosophy are identical across all machine series.

Intuitive and smart: Our SELOGICA and GESTICA control systems facilitate your work decisively!
Performance-oriented and cost-efficient: With a perfect spectrum of available machine-sizes, our electric machines are suitable for all of your applications. The GOLDEN ELECTRIC is our standardised entry-level model at an unbeatable price. In the case of higher requirements in terms of equipment, our EDRIVE offers additional features. And the more demanding your production tasks become, the more interesting our ALLDRIVE will become for you. Choose your ALLROUNDER from one of the most comprehensive ranges in the industry.

Further information:
Electric ALLROUNDER brochure
Speed
Injection, dosing and opening and closing of the mould are servo-electrically driven as standard on GOLDEN ELECTRIC, EDRIVE and ALLDRIVE machines and are therefore completely independent. Fast acceleration and speeds, as well as simultaneous movements enable high-speed cycles.

Precision
Play-free, direct-acting spindle drives provide for mechanically rigid drive axes and dynamic movements. The excellent positioning accuracy of servo-electric drives permits maximum reproducibility and part quality.

Minimising emissions
The liquid-cooled drives operate quietly without air turbulence and reduce emissions into the environment. Closed drives and spindle systems prevent exposure to dust caused by abrasion. Perfect conditions for use in pure production environments.

Energy efficiency
The toggle-type clamping unit, the high efficiency of the servo-electric drives, as well as the recovery of braking energy to the mains form the basis for high energy efficiency. The energy requirement is reduced by between 25 and 50 percent.

Value
The high degree of reliability of the machines and subsequent minimal variability in the process is achieved through many technical details. This includes, for example, the closed cooling circuit of motors and converters for fast cycles and long holding pressure phases.

---

Uncompromising high-end technology: Servo motors are generally liquid-cooled.

Compared to a standard hydraulic machine, up to 50% energy saving.

HIGH PERFORMANCE: HYBRID ALLROUNDERS

If you are interested in high performance during the production of mass-produced technical parts, then you should work with our hybrid ALLROUNDERS. This is because the HIDRIVE brings the best of our modular product range together in a single series just for you: Electric speed and precision paired with hydraulic power and dynamics. Reliable, highly-productive and simultaneously energy-efficient – for your production. Day after day. 24 hours. Around the clock.

Further information: Hybrid ALLROUNDER brochure
Production capacity

The hybrid ALLROUNDER machine concept has been configured with the particular aim of achieving high production capacities. It brings together the servo-electric clamping units of the ALLROUNDER A and generously dimensioned injection units with hydraulic accumulator technology. All movement axes operate completely independently of one another.

Energy optimisation

The servo-electric drives for mould movement and dosing as well as the recovery of braking energy to the network form the basis for high energy efficiency. Moreover, the hydraulic drive operates with a performance-adapted pump and an efficiency class IE3 electric motor.

Cycle time reduction

Simultaneous movements combined with extremely short dry cycle times of the servo-electric clamping units enable fast cycles. Special features such as “injection on the fly” while the mould is closing or dosage that takes place across several cycles are also available.

Dynamics

As well as the servo-electric toggle, the hydraulic accumulator technology also reduces cycle times. This enables large, dynamic injection volume flows to be achieved. Furthermore, a position-regulated screw ensures maximum reproducibility and part quality.

Cost-efficiency

The sophisticated hybrid ALLROUNDER technology is synonymous with reliable operation and maximum availability. In addition, technical detailed solutions minimise the set-up and maintenance effort. This also makes day-to-day production much more efficient.
Reliable, proven injection moulding technology “Made by ARBURG - Made in Germany”: This is what our hydraulic machines stand for. With the ALLROUNDER principle, differential piston system and position-regulated screw, we have been setting benchmarks since 1961. They range from the low-cost entry-level GOLDEN EDITION model to the flexible, adaptable ALLROUNDER S. Our modular design offers you process-optimised solutions with low operating costs and the greatest possible variety of applications. You simply specify your requirements and we configure a suitable ALLROUNDER especially for you.

EXEMPLARY: HYDRAULIC ALLROUNDERS

Distance between tie bars: 170 - 920 mm
Clamping forces: 125 – 5,000 kN
Injection units: 30 - 4600

Further information: Hydraulic ALLROUNDER brochure
Diverse applications

Our machine concept is extremely flexible and can be precisely adapted for operation in conjunction with all familiar injection moulding processes. This is ensured by numerous equipment and configuration options. For example, the ALLROUNDER S can
- use swivelling clamping units to overmould inserts (ALLROUNDER principle).
- work with an interchangeable injection unit in the mould parting line.
- fill the mould in a linear action using a horizontally free-sliding injection unit (VARIO principle).

Individuality

The power of the drive technology can be individually adapted. Multiple hydraulic variants and electrical configuration levels allow you to achieve greater energy efficiency, higher precision and speed - just as your application demands.

Cost efficiency

The GOLDEN EDITION is our entry-level hydraulic model. The recipe for success: The use of proven, uncompromising high-end technology, standardised at an unbeatable price. Two-circuit pump technology is provided as standard for example.

Reproducibility

Regulated injection ensures the customary high part quality. Our unique position-regulated screw can therefore be used to achieve dynamic and reproducible injection that is on a par with electric machines.

Reliability

Optimum availability and a long service life are synonymous with the ARBURG name. Examples include energy-saving oil displacement via the differential piston system of the clamping unit, or the scratch-proof powder enamel coating of the machine components.

REPRODUCIBLE MOULD FILLING

thanks to a position-regulated screw – variations in shot weight can be significantly reduced
Clearly: Much of the focus with our vertical ALLROUNDER machines is on efficiency in practice. This calls for dependable, process-reliable and precise operation. But above all, they must be one thing: Ergonomic. This ensures that cooperation between human and machine is a comfortable experience. Our versatile vertical product range is fully focused on the overmoulding of inserts and offers you all the features required to help you manage your specific tasks.
**Ergonomics**
Efficient overmoulding of inserts? This means organising manual work in a comfortable and time-saving manner. This is precisely the purpose of our vertical free-space system on the ALLROUNDER V: It provides unimpeded access to the mould when inserting and removing items.

**Application suitability**
The right technology for every application. We achieve this thanks to:
- A wide range of designs, machine sizes and injection units
- Vertical and horizontal arrangement of the injection units
- Task-specific equipment, such as for silicone processing

**Automation**
Shorter cycle times and higher productivity: Rotary and shuttle tables are available to enable simultaneous insertion and removal during the injection process. Versatile configuration options ensure that the machines can also be very easily integrated in turnkey systems.

**Process reliability**
High plasticising and moulded part quality: Our special position-regulated screw enables reproducible injection, comparable with electric machines. The servo-electric rotary tables of the ALLROUNDER V and T operate energy-efficiently, quickly and precisely.

**Space optimisation**
 Especially our ALLROUNDER V machines impress with their compact design and small footprint. This makes the machines ideal for use, even in confined production environments. The scope for planning the installation of the machines remains correspondingly high.

PERFECTLY COMPATIBLE: THE ADDITIONAL EQUIPMENT

Our machine technology is completed by flexible additional equipment, with which you can adapt your ALLROUNDERs individually to the relevant production requirements and injection moulding process. Modular design, simple operation and complete integration are a matter of course for us. The same applies to comprehensive application technology consulting.

Our aspiration is to support you in every aspect. To ensure that you can do one thing without fail: Produce efficiently!

Outstanding support

- Machine and process technology consulting
- Assistance with moulded part and mould design
- Support during in-depth trails and tests

Further information:
Application expertise brochure
THERMOLIFT brochure
Application expertise
You couldn’t ask for more! To find the best solution for you, we provide well-founded expertise in all facets of injection moulding and special additional equipment e.g. for
• Multi-component injection moulding
• Injection moulding of silicones, elastomers, thermosets and metal or ceramic powders
• Injection moulding of lightweight parts through foaming processes, Fibre Direct Compounding (FDC) and thermoplastic composites
• Working under clean-room conditions
• Micro injection moulding
• Injection compression moulding
• Overmoulding of inserts

Peripheral equipment and accessories
The individual expansion of your ALLROUNDER does not end with process technology, however. In terms of peripheral equipment and accessories, we offer efficient options:
• THERMOLIFT granulate dryer and conveyor – compact unit for installation close to the machine, with which two ALLROUNDERs can be fed.
• Unscrewing units for precise de-moulding of external and internal threads in moulded parts – optionally available in various versions.
• Rapid clamping systems for simple, fast and reliable mould changes.
Integrated: We automate operations upstream and downstream of the injection moulding process.

PRIMARY CONTRACTOR
ARBURG

Machine, robotic system, peripheral equipment, process control, data management – we relieve you of the planning and implementation of demanding production tasks. You have just one point of contact, one order and one delivery date for your project. As a technology and system partner, we assume overall responsibility. And you can concentrate on what’s essential: Your customers.
Linked: We also combine injection moulding with other processes.

Customised: We design complete turnkey systems tailored to your specific requirements.
Productivity and reliability really count. That’s why our ALLROUNDER machines and robotic systems work hand in hand. Adapted to your specific requirements. Precise, fast and reliable. Integrated complete solutions that allow you to start production directly. We make everything possible. This is thanks to a broad product range and extensive integration with which you can centrally manage and synchronously control processes. This is the only way to ensure highly efficient and cost-effective robotic technology.

FACILITATORS: ROBOTIC SYSTEMS

</tbody>
</table>
Plug and work
Space-saving design and fast production readiness: The ALLROUNDER and robotic system form a fully functional CE-certified unit. As a primary contractor, ARBURG guarantees perfectly coordinated interfaces and safety features – both mechanical and electrical.

Flexibility
Can you coordinate robotic technology precisely to every handling task? Yes, you can! Our product range extends from a simple picker to versatile linear robots and multi-functional multi-axis robots. Moreover, various designs and special versions with practical configuration options are also available in terms of size, axes, axis drives and lengths. Also available: Extensive interfaces for gripper and peripheral technology. Greater flexibility is not possible.

Cost-efficiency
Top quality and performance: We also implement these principles consistently with our robotic systems. The robust, low-maintenance technology ensures a long service life and high availability. Extensive integration simplifies set-up and reduces mould-entry times.

Ease of use
As with ALLROUNDERS, robotic systems can be configured using typical ARBURG sequence programming. The signal exchange goes well beyond the range of functions of a Europmap interface. This has clear benefits for you:
- One data set – no adaptation required
- Synchronous process control - short cycle times
- Assistance functions – easy set-up, fast start-up
- Low training requirement - same approach for all machines

93,000,000 KILOMETRES
- the distance covered by ARBURG robotic systems each year

Fully compatible: Standardised operating system reduces training and set-up requirements.
Looking to further increase added value with regard to your injection moulding process? We can offer you the wide-ranging expertise for the automation and integration of even complex process steps. Several hundred individual turnkey systems go into operation each year, with ARBURG acting as the primary contractor and covering all aspects, from design to cycle-time optimisation. Just tell us your production task and we’ll take care of it. Professionally and reliably - just as you’d expect from us.

A great deal is possible:
Automated process steps increase production efficiency.

Interdisciplinary teamwork:
We generate synergy effects for individual project concepts.

Further information:
Turnkey projects brochure
All-round carefree package

Our turnkey experts are called in whenever operations need to be integrated upstream and downstream of the injection moulding process. We assume overall responsibility as “architects” of your turnkey system. Services range from individual design, the definition of interfaces, as well as the coordination and monitoring of the entire project, from procurement to commissioning. This all-round carefree package continues seamlessly in our range of services. Here too, we act as a point of contact that takes care of all aspects.

Comprehensive project management

We always provide the best turnkey solutions because we network at an interdisciplinary level in brainstorming teams. This gives you access to our extensive expertise. System concepts are developed together with you and always follow the “second pair of eyes principle”. Discussing all issues as a team ensures maximum creativity and confidence in realising all your tasks. We deliver your complete turnkey system on the date agreed with you. Because these are pre-tested and the sequences are optimised, they can quickly go into production.

A local presence, worldwide

Our position within the market, size and global presence make us a reliable partner the world over. We provide not only local sales and service, but also turnkey experts who design production cells tailored to your market and realise them with local partners. This has several benefits for you: No language barriers exist and physical proximity enables faster processing of inquiries.
Unique approach: integrated material preparation melts the granulate in the same way as in injection moulding.

We are completely redefining plastics processing with our patented process for industrial additive manufacturing, known as ARBURG Plastic Freeforming (APF). The freeformer, our open system for the additive manufacturing of functional parts, produces efficiently and flexibly. Parts created directly from 3D CAD data. Using qualified standard granulates. Layer-by-layer application of tiny plastic droplets. Get started with a technology that offers brand new opportunities to produce one-off parts and small-volume batches. 

ADDITIVE MANUFACTURING REINVENTED: FREEFORMER

freeformer – more than just 3D printing

- Additive manufacturing with standard granulates
- Individual process settings and material qualification
- High part quality
- Technical functional parts – also as hard/soft combinations

Further information: freeformer brochure
Further information:
ARBURG Plastic Freeforming
SINGLE-UNIT BATCHES: NO PROBLEM.

Material diversity
The freeformer can be used to process standard granulates in a flexible way. It does not require any prefabricated materials such as resins, powders or filaments. This means that a wide range of low-cost materials and dyes are available to choose from. However, reproducible additive manufacturing requires the materials used to be qualified in a standardised process. This results in pre-defined process settings, which we make available to you for reference materials. We are continuously expanding this database. In addition to the familiar additive standard materials, you can also process special original materials using our freeformer. These include, for example, TPEs with various Shore hardnesses, semi-crystalline PP, biopolymers, flame-proof materials and medical-grade polylactide.

Open system
The freeformer is designed as an open system. Slice and process parameters are freely programmable and can thus be individually adapted at any time. Based on our data sets for reference materials, your modified original materials are quickly available for use, as was the case with a PC approved for aerospace applications or an FDA-compliant medical-grade TPE.

Multi-component technology
The freeformer is equipped with several discharge units as standard. You can use these to produce parts in various material and colour combinations – also as resilient hard/soft combinations. In the case of complex part geometries, you can alternatively use one component to construct support structures.

Highly customised: open for part optimisations and qualification of your own materials.
DIGITALLY NETWORKED: SMART PRODUCTION

More transparency, more flexibility, more efficiency! The basis for this are automated processes and direct information exchange. Process data is captured online, shared across the network, and the sequences are dynamically controlled and optimised. However, this calls for interdisciplinary expertise, which is what we provide for you. Our wide-ranging expertise extends from machine, process, automation and control technology through to IT networking. It enables your individual solutions for digitalisation to be implemented in a targeted manner.
NETWORKER: HOST COMPUTER SYSTEM

// Saving time and costs: Our modular ARBURG host computer system (ALS) offers you all the features that you need for the efficient organisation and cost-effective optimisation of your injection moulding production facility. With the experience from several hundred installed Manufacturing Execution Systems (MES), we deliver you the ideal basis for your digital transformation. \\

Greater flexibility: Wide range of options for integrating the entire production facility, such as I/O modules, etc.

More efficiency: Optimal utilisation of the available resources thanks to a central overview.

Further information: Host computer system brochure
Practical management
Networking of the complete production facility, including manual workstations? ALS offers you every freedom in this regard: From input terminals and I/O modules through to standardised interfaces for the injection moulding machines of all manufacturers. Your system can be always be extended flexibly thanks to combinable modules.

Detailed planning
Special injection moulding production features such as mould inserts, for example, make detailed planning excessively complex for conventional ERP, PPS and BDE control stations. With ALS, you optimise your production based on online data, capacity utilisation, quality and delivery reliability of your production.

Automatic archiving
Reliable documentation without complicated manual data input and incorrect entries. This simplifies audits and certifications considerably, leaving you more time for organisation and optimisation of your production – ALS also assists you in a targeted manner here.

Reliable information
ALS actively informs you and keeps you up-to-date worldwide! Feedback and key figures relating to machines, orders, shifts and production quality are immediately available. Maximum transparency, wherever, whenever and however you need it: Whether at the PC, in the production facility, or on the go.

Simple implementation
We plan and implement the suitable ALS system solution jointly with you. On-site guidance, as well as comprehensive training options ensure a high level of acceptance among your employees as well as amortisation of your investment in a short time.

By eliminating manual data entry on 20 machines around

1,250 h
OF WORKING TIME
SAVED PER YEAR

Greater transparency: Precise information allows you to make analyses and decisions at all times
EFFICIENCY DRIVER: SMART FACTORY

This digitisation of the factory makes it possible to integrate processes that respond extremely flexibly to changes and can largely control themselves. This leads to a higher value creation from products. Furthermore, completely new business models can be developed, e.g. through the direct integration of customer wishes. As a technology leader and trendsetter in the plastics industry, we are constantly opening up new horizons in what is technically possible. And we impressively demonstrate this with specific solutions. This means that the associated potential is directly available for you.

For your digitalisation:
- Assistance packages for control systems
- Online data acquisition and production organisation
- IT-networked process chains
- Mass customisation in 3D
- Smart services
Individual strategies required

The digital transformation with modern information technology such as the Internet cloud and mobile devices will significantly transform the industrial process.

- Transparent production – processes are traceable.
- Flexible production – small-volume and one-off parts can be produced cost-effectively.
- Efficient production – processes are resource-saving and fast.

There is no general solution for digitisation! This is because no two injection moulding production tasks are alike. Every company must much rather devise dedicated solutions for their own production processes. We will be delighted to help you!

ARBURG offers numerous components

Our aspiration is: To be your technology and system partner! Whether you want to make individual machines “smarter”. Whether you want to flexibly implement automated turnkey systems. Whether you want to make your production more transparent through integrated data exchange. On the basis of our machine, robotic, process, control and information technology, we can support you on your way to the "smart factory". You benefit from modular, scalable and individually combinable components with which you can efficiently design and optimise your processes. That is "Industrie 4.0 – powered by Arburg".

Online data exchange: Through IT networking, customer wishes can be integrated in the value-added chain.
Simply working cost-effectively – with us, you’re on the right track! In order to further enhance the efficiency of your plastics processing, holistic thinking is required. Injection moulding, industrial additive manufacturing, individual turnkey projects, end-to-end digitalisation, full-service worldwide – we meet all your requirements, professionally and reliably. For all industries. Whether in the automotive industry, packaging sector, electronics, medical technology or optics – as you have come to expect from us.

TOP SOLUTIONS FOR ALL INDUSTRIES

Medical: Production and packaging of dental drills under clean-room conditions.

Automotive electronics: Production of complex hybrid connector on turnkey systems.

Medical: Individual additive manufacture of a cranial bone made from PLLA.

Further information: Production efficiency brochure
Optics: Implementing an innovative 3D touch panel for washing machines in reproducible part quality.

Packaging: Production of two-component closures in high volumes using cube-mould technology.

Lightweight construction for automotive applications: Reducing costs for high-strength parts with Fibre Direct Compounding.
For us at ARBURG, service is not just something we do, but rather an expression of an attitude: When you use our injection moulding or additive manufacturing technology, you can rest assured of comprehensive support over the entire system lifetime, in the knowledge that you can rely on our world-class, responsive service offerings. Be it the delivery of genuine parts, telephone hotline, immediate deployment of our service technicians or specialist training courses: We do our utmost to ensure that you can produce efficiently and successfully.
