 Companies wishing to use access to ARBURG's digital service world can register at [www.arburgXworld.com](http://www.arburgXworld.com).

Reduced footprint: The control cabinet is integrated in the machine base.

## Leading technology

A reliable hydraulic machine with a minimal footprint: The "ALLROUNDER 270 S compact" follows the tradition of our successful model 221 K, allowing you to make the best use of your production area. Added to this is everything that defines modern injection moulding technology for profitable parts production.

- Energy-saving ARBURG servo-hydraulic system (ASH): The water-cooled, speed-controlled servo motor runs quietly without air turbulence and with low waste heat.
- Highly wear-resistant cylinder module: Suitable for processing thermoplastics with highly abrasive or corrosive components

- Smart SELOGICA control system: The numerous functions ensure reliable quality with fast cycles and even make special processes as easy as standard ones.
- Compatible with existing moulds: The hole patterns in the mounting platens take into account all standard requirements in this size class – optionally for Europe and the USA.

## Best delivery time, best price

Online, fast, reliable: Via our "arburgXworld" customer portal, you can now configure injection moulding machines completely by yourself and order them directly at a fixed price! Using the "Configuration" app, you can customise the standardised basic version with defined options – simple, secure and menu-driven. For you this means: attractive delivery times and prices!
