

PROJECT ENGINEER AT ARBURG USA

WIR SIND DA.

The ARBURG group is a leading manufacturer of plastic processing machines worldwide. With about 3,600 employees, we are considered the epitome of innovation in the plastics industry.

Job Qualifications:

- /// Master's Degree in Mechanical Engineering (or foreign equivalent) and 1 year of related experience required
- /// Experience with preparing specification and quoting of projects, preparing technical documentation, and working with cross functional team
- /// Brief domestic and international travel required

Job Duties:

- /// Analyze, evaluate, and test injection molding machines, robotics and peripherals. Analyze inquiries and prepare specifications and quotations for customers. Evaluate mechanical product parts, resolve system malfunctions and provide technical information
- /// Investigate equipment failures to diagnose faulty operation and recommend remedial actions. Recommend design modifications to eliminate machine malfunctions. Monitor execution of projects from planning, development, and acceptance to delivery and setup
- /// Coordinate with internal department teams and external resources for project implementation. Provide proof of concept and prototype projects. Prepare technical project documentation for the After-Sales Service team

We offer State of the art work environment, with international orientation and a global presence. We honor high performance and support personal development.
